

	Standup #4 (3/27/18)		
<i>Team Member</i>	<i>What have you accomplished since last meeting?</i>	<i>Are there any obstacles in the way of meeting your goal?</i>	<i>What will you accomplish before the next meeting?</i>
Eric Choi	Implemented interaction with database endpoint in heroku server, cleaned up the Sign In and Registration Page, working on adding in redirects.	Studying the Heroku endpoint and the appropriate ReactJS libraries to send requests to that endpoint.	Develop a design mock-up of the Login and Registration buttons, work on redirecting users from their previous pages.
Katrina Chandra	Finished pagination style and functionality. Began researching new collage components.	Collage component implemented requires hardcoding heights and widths... need to find new component or get around this	Continue working on making the collage look better.
Caleb Thomas	Setup database migrations. Finished user registration and login endpoints.		Migrate list storage to be stored in the database and associated with a user.
Shray Pungaliya	Mocked Beans. Added profiles. Changed collage builder to send JSON (test and implementation). Fixed Recipe controller to sort/filter recipes (due to test failures). Added radius to maps (couldn't do it directly with API so manually break when radius is met)	Might have to invert radius and time such that all restaurants in radius show up, and then are sorted by time	Sort recipes and restaurants by appropriate measures
Kartik	Outlined documentation. Filled out sections for Scrum that are finished so far	Couple of clarifications fixed by Halfond	Continue documenting. Finish up Parallel Programming + Simple Design Section
