Members: Shray, Kartik, Katrina, Eric, Caleb | Location: CSCI 310 Lecture | Date: 4/17 | Time: 11:20am

Overall Notes:
1) Login - Full points
2) Radius -
    a) More cucumber tests for radius
    b) Radius in miles (MAJOR change for frontend tests. Convert all default values of "10000" to "2")
    c) Nothing in radius → error message under radius
        i) No size based on inside
        ii) 6 points left (miles and error message)
    d) More test cases of different radius sizes (JUNIT)
3) Pagination -
    a) White box tests
    b) More cucumber tests (do more results, use buttons)
        i) 31 results
    c) Sliding window of pagination (5 should be in middle of pagination)
        i) Only 5 page number at a time
        ii) Current page at pos 3
            (1) Floor is 1
            (2) Don't go above existing pages
        iii)
4) Prior Searches -
    a) Frontend scrolling
    b) Appear at bottom of results page
        i) Horizontally scrollable area
        ii) Don't need date
        iii) Each tile should be represented with mini version of the collage
        iv) Don't care about amount + radius
            (1) But still have query with those values
        v) Current search is not there
        vi) If you click on move to front
5) Static and center columns
    a) Change cursor
6) Grocery list -
    a) Get to grocery list from all pages but search
    b) Each item to be checked (leave it) and make it persist
    c) Duplicate items to merge
        i) (1 cup and 2 cup should be stored as 3 cup)
        ii) Only if same units
7) Reorder lists-
    a) Full points

          b) But we need to show next time that it persists
  8) Maintain info beyond single session-
          a) cucumber
  9) User interfaces must look modern + be attractive-
          a) Menu should not be cut off
          b) Resizing
          c) Cursor should show instead of the thing that looks like "I"
          d) Columns shouldn't resize

81 points

_____

Team recap/feedback:
      Cons:
             - Didn't synchronize the tests (Make sure <u>all</u> cucumber tests run)
             - Miscommunication, forgot to write test cases for persistent session
             - Last minute scramble
             - Front-end design didn't adhere very closely to what stakeholders desired
      Pros:
             - Better front-end/back-end synchronization
             - Made sure that project was ready before deployment
             - good working around busy schedules
             - Sustainable development worked for creating features
             - worked well with feedback given for the documentation

_____

Plan for next time:
      - Work on tests earlier and try to get them finished at least 2 days before the deadline
      - Get multiple members to approve on front-end design
      - Ask stakeholders for help if trouble understanding the documentation portions
     - Start working *soon* as the deadline for finishing the sprint is *much shorter*
